

MUHAMMAD FARIS HADI MULYO

Jakarta | muhfarishalyo@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend Developer with **2+ years** of experience building and optimizing scalable applications using Java Spring Boot, NestJS, and relational databases. Skilled in API development, backend architecture, performance optimization, system modernization, and database optimization across consulting and healthcare platforms. Experienced working with enterprise legacy systems, distributed backend services, and high-performance APIs. **Passionate about building scalable backend systems and growing as a Backend Engineer focused on system architecture and high-performance applications.**

WORK EXPERIENCE

Software Engineer

Aug 2024 – Present

PT Koneksi Strategis Indonesia

- Led modernization of legacy monolithic systems by upgrading Java runtime from Java 7 to Java 17 across 5+ modules, resolving deprecated APIs and backward compatibility issues.
- Reduced batch processing time from 130s to 60s (54% improvement) through backend code optimization and query efficiency improvements.
- Designed and implemented validation layers using Spring Boot validation and custom validators covering 10+ business rules for booking and payment systems.
- Improved API reliability by standardizing error handling, HTTP response structures, and internal error codes for consistent client integration.
- Enhanced observability through structured logging implementation (MDC logging & service-level logging) to improve debugging and production monitoring.
- Developed and maintained integration and unit tests for booking and payment flows using JSON-based testing scenarios.
- Optimized database interaction using Spring Data JPA with PostgreSQL, MySQL, and Oracle databases.
- Maintained and enhanced enterprise legacy systems while ensuring production stability and backward compatibility.

Tech Stack: Java, Spring Boot, Spring Data JPA, PostgreSQL, MySQL, Oracle, REST API, JUnit

Backend Developer

May 2024 – Jun 2025

Chup Online Sdn Bhd

- Applied Domain-Driven Design (DDD) principles to reorganize backend services into business subdomains, improving maintainability and enabling parallel development.
- Optimized critical backend service paths through profiling, algorithm refactoring, caching, and I/O improvements, reducing p95 latency from 1700ms to 100ms.
- Established backend coding standards adopted across multiple services by 4 engineers to improve consistency and maintainability.
- Evaluated and recommended Redis-based asynchronous queue architecture for notification processing to improve latency and service decoupling.
- Developed scalable backend services and API integrations for healthcare operational systems.

Tech Stack: NestJS, TypeScript, Redis, PostgreSQL, REST API, Laravel, PHP

Fullstack Web Developer

Nov 2023 – Feb 2024

PT Zona Karya Nusantara

- Collaborated with stakeholders through workshops and user discussions to translate business requirements into technical implementation.
- Implemented system enhancements and feature improvements across frontend and backend modules.
- Contributed to product iteration and feature adoption improvements through user-driven development insights.

Tech Stack: PHP, Laravel, MySQL, JavaScript, Ajax

Backend Developer

May – Nov 2023

Elux Space

- Developed and maintained backend services and application modules using Laravel framework.
- Built and maintained database-driven application features with focus on clean code and maintainability.
- Collaborated in Agile development cycles for feature delivery and backend implementation.
- Utilized Git version control for collaborative software development and deployment workflows.

Tech Stack: PHP, Laravel, MySQL, PostgreSQL, Git

PROJECTS & ACHIEVEMENTS

Askala AI — Decentralized Educational Assistant

- Built decentralized AI educational assistant leveraging Internet Computer Protocol (ICP).
- Implemented Motoko smart contracts, Internet Identity authentication, and React + Vite frontend integration.
- Qualified for Regional Round in World Computer Hacker League 2025.

Hackathon KMIPN 2023 — Finalist

- Achieved finalist position in national innovation and programming competition.
-

EDUCATION

Politeknik Negeri Malang (2020 – 2024)

Business Information System

- GPA: 3.81 / 4.00
-

LANGUAGES

- Indonesian (Native)
 - English (Professional Working Proficiency)
-

SKILLS

Languages: Java, TypeScript, PHP, Javascript.

Frameworks & Backend: Spring Boot, Spring, NestJS, Laravel.

Databases: PostgreSQL, MySQL, Oracle, Supabase, Redis

Testing & Tools: JUnit, Integration Testing, Git, ApiDog.

Concepts: Backend Architecture, Domain-Driven Design (DDD), Performance Optimization, API Development, System Modernization, Database Optimization
